

THE SUPER COLLAGEN

A 3 STAGE COLLAGEN CYCLE IN 1

Mirapelle Super Collagen is a volume building, rejuvenating serum. It is a combination of peptides and proteins, designed to boost our skins' Collagen levels, with 3 stage Collagen cycle to organized skin's collagen fibers.

Our skin is an intricate network of collagen fibers, intertwined and woven to form a protective barrier against the outside world.

As we get older, this Collagen fibers become disorganized and degraded, losing elasticity like a deflating balloon.

When we're younger, the body naturally replenishes and reorganizes the Collagen fibers that support the skin, as we age, restoration becomes less. Loss of support and poor Collagen levels culminate in the appearance of wrinkles.

1.0 oz./30 ml. \$65.00

benefits:

- Restore the synthesis of types I, III and IV Collagen
- Helps structures and organizes Collagen fibrils
- Helps prevent the natural breakdown of Collagen
- Helps increase skin suppleness and elasticity
- Moisturizes and rehydrates which helps reduce wrinkles and fine lines

direction and use:

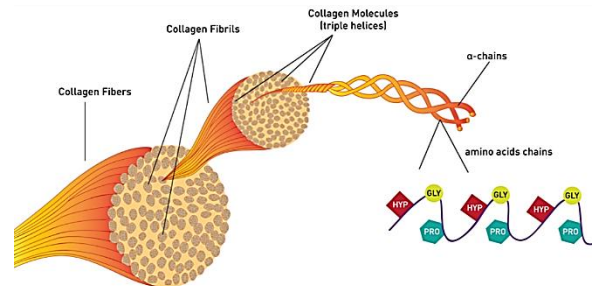

- Use morning and evening preferably after washing face
- Apply 2 to 3 drops to clean dry face
- Gently massage into skin follow with moisturizer.

ingredients and benefits:

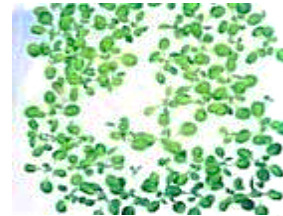

Chondrus Crispus (Seaweed) Extract, Purified Water (Aqua), Hyaluronic Acid, Pseudoalteromonas Ferment Extract, Hydrolyzed Wheat Protein, Hydrolyzed Soy Protein, Tripeptide -10, Citrulline, Tripeptide-1, Phenoxyethanol, Ethylhexylglycerin.

The 3 key stages of Collagen Cycle

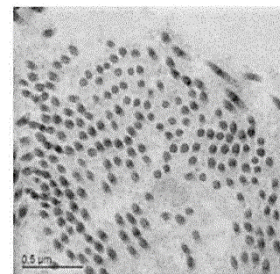

1. The synthesis of new Collagen.
 2. The control of Collagen fibril dimensions and arrangement.
 3. The inhibition of enzymatic destruction to avoid the natural degrading process.
- Pseudoalteromonas Ferment Extract. A fermented substance found only in King George Island, Antarctica that contains 3 amino Acids glycine, histidine and lysine (GHK). Clinically proven to increase Collagen and elastin levels. In Vitro studies have shown this remarkable ingredient produce up to 128% increase in Types I Collagen and up to 81% increase in Types IV Collagen.
 - Hydrolyzed Soy Protein (HSP) and Hydrolyzed Wheat Protein (HWP) are broken down into key amino acids which help boost the proliferation of Type III Collagen.
 - Tripeptide-10 Citrulline is used to organize and arrange Collagen for better stability, regulate fibrillogenesis and control fibril growth and size which makes the skin becomes more supple, higher resilience to stretching and helps reduce the appearance of wrinkles.

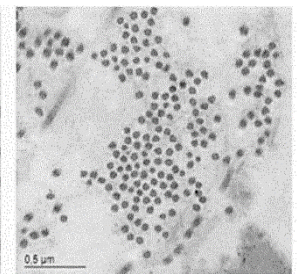

Collagen is made up of a network of fibers. The healthier and more organized these fibers are, the younger the skin appears

Collagen Cycle Serum uses Pseudoalteromonas Ferment Extract, as well as Hydrolyzed Soy Protein and Hydrolyzed Wheat Protein in order to boost Collagen growth

Control

Tripeptide-10 Citrulline

Collagen is then arranged and organized for better stability by using the Tripeptide-10 Citrulline ingredient

Manufactured For Mirapelle, Made in U.S.A.
